# Place your bet today on tomorrow's mobility. With AlphaElectric.

Changing mobility patterns and increasing urbanisation call into question conventional drive concepts and pose entirely new challenges to mobility. We think about the future of mobility, and with AlphaElectric, we offer a comprehensive solution for sustainable enterprise mobility. At AlphaElectric, we accompany you in all aspects of eMobility and guarantee the flexible incorporation of eMobility in your existing fleet. From the initial analysis to the choice of the right vehicles and suitable charging infrastructure to an individual selection of mobility services.

**In only four steps, we work with you to find your individual eMobility solution and to make it an efficient addition to your vehicle fleet.**

## 1 Fleet analysis

**The best strategy to realise the full potential of eMobility: one-to-one discussion.**

Together, we determine your eMobility requirements. At this point, the uses envisaged and the range determine the degree of electrification and your savings potential.

### Your advantage:

You receive from us a precise concept for the efficient, sustainable and economical management of your eMobility needs.

## 2 Vehicle selection

**The question of a suitable drive concept generates a clear answer: the suitable electric vehicle.**

For us, eMobility is not a question of the brand of vehicle, but of the drive concept. Only when this technology is perfectly adapted to your use profile can eMobility be an intelligent addition to your vehicle fleet.

### Your advantage:

No matter what your requirements are, we will find the right drive concept for you.

## 3 Charging solutions

**Individual requirements generate a solution tailored to your needs: charging infrastructure with 100% availability.**

The prerequisite for the trouble-free integration of eMobility into your vehicle fleet is charging infrastructure optimally adapted to the vehicles and their use. For example, a quick-charging station enables continued driving after a lunch break, and the wall box ensures recharging overnight. Well-grounded recommendations from our specialists and the wide range of charging solutions help you make the right decision – quickly and easily.

### Your advantage:

From selection to installation to commissioning of the charging solution – we accompany and support you during the entire process.

## 4 Mobility services

**An integrated product for 360-degree eMobility built up from individual services: modular mobility services.**

Our modular mobility services provide you with a comprehensive choice of additional services for electric vehicles, which can be individually combined to suit your needs. From the smartphone app AlphaGuide and the 24-hour helpline to driver training courses to rental cars for long business journeys.

### Your advantage:

With flexibly bookable mobility services, we ensure the trouble-free service of all electric vehicles and smooth operation of your fleet.

**Should you require further information, your personal contact at Alphabet or one of our customer service team members will be pleased to assist you.**
